Checking the Package Contents.2 Read This First.3 What Do You Want to Do.4 Conventions Used in This Guide.8 Safety Precautions.9. The latter part of this chapter explains how to shoot and view images in Easy Mode, how to shoot and view movies and how to transfer images to a computer.

Be sure to charge the battery as it is not charged at the time of purchase. CB2LX CB2LXE To protect the battery and prolong its life, do not charge it for longer than 24 hours continuously. SD, SDHC and SDXC memory cards have a writeprotect tab. Since the dates and times recorded into your images are based on these settings, be sure to set them. What if the clock appears when the m button is pressed. The clock will appear if too much time passes between pressing the and the n button in Step 2. If the clock appears, press the m button to remove the clock and repeat Step 2. Formatting initializing a memory card erases all data on the memory card. As you cannot retrieve the erased data, exercise adequate caution before formatting the memory card. The camera can also detect and focus on faces, setting the color and brightness to optimal levels. If this happens, try shooting in G mode p. To reduce redden and to assist in focusing, the lamp may light when shooting in dark areas. Please note that erased images cannot be recovered. Exercise adequate caution before erasing an image. The last image you took will appear. Choose an image to erase. This prevents incorrect operation of the camera, allowing even beginners to take worryfree pictures. This prevents incorrect operation of the camera, allowing even beginners to view and erase images without worry. The audio will record in stereo. If you continue shooting for a long time, the camera may become warm. This is not a malfunction. Different scene icons will appear. Under certain conditions, the icon that appears may not match the actual scene. System Requirements Windows Windows 7. Transferring Images to a Computer for Viewing Install the Software. Some accessories are not sold in some regions, or may no longer be available. Power Supplies CAUTION RISK OF EXPLOSION IF BATTERY IS REPLACED BY AN INCORRECT TYPE. This product is designed to achieve excellent performance when used with genuine Canon accessories.

P, Tv, Av, M Mode You can make settings such as the shutter speed and aperture value in order. Refer to pp. 164 165 for details on information that appears on the screen. Shooting Information Display Playback No Information Simple Information Display You can also switch the display by pressing the l button while the image displays shortly after shooting. However, the brightness of the image on the screen, and the brightness of the actual image recorded may be different. Available Options Menu Items Choose a shooting mode. The menu items are organized under tabs, such as for shooting 4 and playback 1. Are there functions that cannot be reset. Performing a lowlevel format on initializing a memory card erases all data on the memory card. As you cannot retrieve the erased data, exercise adequate caution before performing a lowlevel format on the memory card. When stopping low level formatting, the data will be erased but the memory card can be used without problem. Shooting in Special Scenes The camera will select the necessary settings for the conditions in which you wish to shoot when you choose the matching mode. Shoot with the Effects of a FishEye Lens Fisheye Effect Lets you shoot with the distorting effect of a fisheye lens. Since you may not achieve the expected results depending on the shooting conditions, try taking some test shots first. What if a smile is not detected. Smiles are easier to detect if the subject faces the camera, and opens their mouth enough to show some teeth when smiling. The camera will shoot approximately two seconds after it detects a wink. Press the l button to accept the setting. Even if your face is not detected after joining the subjects, the shutter will release approximately 15 seconds later. What if the indicator blinks orange and a flashing When you press the shutter button halfway in low light conditions where camera shake is likely, the indicator will blink orange and a flashing screen.

The images may appear coarse, however, depending on the recording pixel setting p. 72 and the zoom factor used. The images may appear coarse, however, depending on the combination of

recording pixel p. Once inserted, however, they cannot be deleted. Be sure to check beforehand that the date and time are correctly set p. 19. You can insert and print the shooting date in images which do not have an embedded date and time as follows. The camera will activate approximately 10 seconds after the shutter button is pressed. You can change the delay time and number of shots p. 79. Press the p button. AE stands for Auto Exposure. What if the shutter speed and aperture value appear in orange. If a correct exposure cannot be obtained when pressing the shutter button halfway, the shutter speed and aperture value are shown in orange. Auto Automatically sets the optimal white balance for the shooting conditions. Day Light Fine weather conditions, outdoor shooting Cloudy Cloudy, shady, twilight conditions Tungsten. My Colors Off Emphasizes the contrast and color saturation for a vivid Vivid impression. Neutral Tones down the contrast and color saturation for neutral hues. Sepia Sepia tones. Shooting Using the Two Second SelfTimer The camera will shoot approximately two seconds after the shutter button is pressed, avoiding any camera shake that occurs when pressing the shutter button. TV display is not available when using HDMI Cable HTC100 sold separately to connect the camera to a highdefinition TV. After locking the focus, the focal distance will not change even when you release your finger from the shutter button. Shooting with Servo AF While the shutter button is pressed halfway, the focus and exposure will continue to adjust, allowing you to take pictures of moving subjects without missing a shot. Suitable for standard shooting conditions, including back lit shots. Evaluative Automatically adjusts the exposure to match the shooting conditions.

At the same time, you can use a slow shutter speed to brighten the background that the light from the flash cannot reach. The camera will set the appropriate aperture value for the shutter speed you set. M stands for "Time value". The camera will set the appropriate shutter speed for the aperture value you set. B stands for "Aperture value", which refers to the size of the aperture opening inside the lens. D stands for "Manual". Also, when the overall image is lacking in contrast, the camera will automatically correct the image for a sharper impression when shooting. Redeye correction may be applied to areas other than red eyes. Safety FE The camera automatically changes the shutter speed or aperture value when the flash fires to avoid overexposing and blowing out the highlights in the scene. You can also set the flash output from the 4 tab. However, depending on shooting conditions the image may become coarse, or the colors may not come out as expected. Color Accent You can choose to retain a single color and change the rest to black and white in a composition. This function is not available when a TV is used as the monitor p. 80. Choose x or v. You can also jump by the shooting date Scroll Display. Viewing Images in Filtered Playback When there are many images on the memory card, you can filter and display them by a specified filter. Filters that do not contain any images cannot be chosen. Filtered Playback You can filter images during a slideshow p. 113 so that only certain images will play back. Each image displays for approximately 3 seconds. If you keep the qr buttons pressed, you can fast forward through images. You can set a slideshow to repeat, or change transition effects and the time that slideshow images are displayed. You can choose from six transition effects when switching between images. Press the l button, and switch to the focus check display p. 44.. White Yellow Yellow White What if the images don't properly display on the TV.

The supplied stereo AV and interface cables and the separately sold HDMI Cable HTC100 cannot be plugged into the camera simultaneously. This could cause the camera to malfunction. If you choose one of those images, the camera will choose four more images letting you enjoy the playing back of images in an unexpected order. This will work best if you take many shots of various scenes. Protected images cannot be erased with the camera's erase function. To erase an image, cancel protection first. Since erased images cannot be recovered, exercise adequate caution before erasing. Protected images p. 120 cannot be erased. Tagging Images as Favorites When you tag images as favorites, you can easily categorize just those images. You can also filter out just those images for viewing, protecting or erasing p. Also, when the overall image is lacking in contrast, the camera will automatically correct the image for a sharper impression. CanonBrand PictBridge Compliant

Printers SELPHY series PIXMA series. Printing will start. You can print from a print list simply by connecting your camera and printer. These selection methods comply with the DPOF Digital Print Order Format standards. These selection methods comply with the DPOF Digital Print Order Format standards. The first part of this chapter explains convenient and commonly used functions. The latter part explains how to change shooting and playback settings to suit your purposes. Setting a Recorded Image as the Startup Screen Image When you press the 1 button and set the camera to Playback mode, you can register an image. Changing Shooting Function Settings If you set the mode dial to G, you can change the settings in the 4 tab p. You can turn off the lamp. Turning Off the RedEye Reduction Function The redeye reduction lamp lights in order to reduce the redeye effect that occurs when shooting in dark conditions with the flash. Image stabilization does not work when the camera is held vertically.

Resumes with the image last Last seen viewed. The index also appears at the end. Terminals Do not unplug the plug or power cord with the camera turned on. This could erase images you have taken or damage the camera. Disabling EyeFi Transfer You can set the card to disable EyeFi transfer. If the EyeFi card has a writeprotect tab, you will not be able to check the cards connection status, or disable EyeFi card transmission when the tab is in the locked position. If the items below do not solve your problem, contact a Canon Customer Support Help Desk as listed on the included customer support list. Power You pressed the power button, but nothing happened. List of Messages That Appear on the Screen. It also detects orientation during playback, so you can hold the camera in either orientation and it will automatically rotate images for correct viewing. Erase Erases images. Protect Protects images. Rotate Rotates images. Favorites Tag or untag images as favorites. My Category Categorizes images.RedEye Correction Corrects red eyes in still images. EOS M og EOS Rserierne af spejllose fullframekameraer leverer samme styrke som et digitalt spejlreflekskamera i et kompakt kamera. For hasslefree shooting, Canons Smart AUTO mode automatically analyzes

the scene and sets the best exposure based on 22 predefined shooting situations. For shooting under low lighting conditions, the ISO sensitivity of the PowerShot SX210 IS can be dialed up to 1600, and when shooting in Low Light mode, expanded as high as an equivalent of ISO 6400. And when shooting handheld, walkabout video, the SX210 takes advantage of Canons Dynamic mode to dampen the bumps along the way. The PowerShot SX210 IS Digital ELPH is the very image of photography at its best, featuring megapixels that are among the highest resolution of the Digital ELPH series to capture every detail of the world around you. Theres never been a better time to think big, knowing that every enlargement will be sharper and more full of life than youve ever experienced before. Powerful 14x 28392mm Equivalent Optical Zoom With Optical Image Stabilizer With the PowerShot SX210 ISs powerful 14x Optical Zoom 28392mm equivalent, youll get upclose fast, handy at sports and school events as well as everyday creative shooting. And with Optical Image Stabilizer, camera shake is greatly reduced even when shooting while walking, helping to ensure clarity and acuity in all your images. HD Shooting Capability at 720p With Stereo Sound and HDMI Output for Playback of Video and Photos The PowerShot SX210 IS lets you record video in beautiful high definition 1280 x 720 pixels.

The camera also makes it easy to enjoy HD movies and still photos on your HDTV with a miniHDMI connector for direct connection to a highdefinition TV monitor. Youll enjoy the HD experience with no degradation of image or audio in the signal, plus the ability to display up to 130 still images at once. The PowerShot SX210 IS also includes spectacular movie functionality. With the Movie button, simply push and you can start shooting video and never miss the perfect moment. When shooting movies, you can get up close with the 14x Optical Zoom for riveting detail and realism, from the overall appearance to facial expressions. And the cameras Smart AUTO technology that helps ensure the perfect still image works to bring that same quality to your movies. The PowerShot SX210 ISs high resolution 230,400 dots 3.0inch wide PureColor System LCD gives you the big picture, whether youre shooting, reviewing or showing off your images. This highresolution screen offers a crisp, clear picture to make shooting, playback and using the cameras menu functions especially convenient. Clear and bright, it features Night Display for easy viewing in low light. Smart AUTO Mode Selects the Right Settings for 22 Predefined Situations Just set the Canon PowerShot SX210 IS to Smart AUTO and youre ready for maximum enjoyment from your picture taking every time. Its a relaxing and satisfying way to shoot because you can completely concentrate on your subject knowing that the camera has the technical details covered. Advanced Canon technology intelligently analyzes your situation and shooting conditions. Then it automatically selects an appropriate setting from 22 specially defined settings. So whether youre photographing flowers, a captivating sunset, or your friends at the park, you can be confident that youre getting dramatic, memorable images. Manual Controls This camera allows you to take full control over your imagetaking experience.

You can use manual focus, manual exposure control, and manual flash settings 3 levels. Now you can wait for the shot you want, with no need to reframe and refocus. Press the shutter fully, and youve got your shot with tight focus and perfectly calibrated exposure. Bring Creativity to Your Photos With New Scene Modes Such as Miniature Effect and Fisheye Effect. The Canon PowerShot SX210 IS Digital ELPH offers creative effects similar to those found in certain professional lenses. Miniature Effect creates an illusion where very large objects appear in miniature proportions. Turn soaring cityscapes into a scene in seemingly dollhouse-like proportions. Fisheye Effect uses barrel distortion to warp the image around the center, giving a distinctive curvature effect to the photo. The curvilinear images produced by Fisheye Effect can suggest the curve of the Earth, the inside of a dome, or the image you see through the peephole of a door. New Smart Shutter Technology Automatically Takes a Picture When the Subject Smiles or Winks. The Canon PowerShot SX210 IS also has Smart Shutter technology, which detects faces in the scene and releases the shutter automatically in response to the appearance of an additional face, or when a smile or sassy wink occurs. These technologies help to make your photography less rushed and more natural, so getting

the perfect shot is even easier. Smart Flash Exposure Makes Natural Looking Photos With Flash in Difficult Situations. Smart Flash Exposure is a technology that can produce excellent flash exposures across a wide range of conditions, and helps ensure against over or underexposed images. The detail and color of your photo remain intact and truer to life even in challenging lighting. DIGIC 4 Image Processor Tracks Faces of Moving Subjects Canons most advanced image processor, DIGIC 4, delivers evolved Face Detection Technology that keeps every face in every photo looking its very best.

The technology finds and tracks the faces of moving subjects until youre ready to shoot, then delivers perfect focus. In addition, exposure, flash and white balance are compensated, so that faces exhibit natural skin tones and backgrounds are properly exposed. Using an internal database of thousands of different photos, iSAPS works with the advanced DIGIC 4 Image Processor to improve focus speed and accuracy, as well as exposure and white balance. Shoot in Low Light Mode for Dimly Lit Situations With an ISO of 400 6400, the Low Light mode takes the Canon PowerShot SX210 IS boldly into the shadows. Now even scenes notorious for having insufficient light, such as those lit by candles, fire, or street lamp, come through in fantastic color and clarity, with less noise. You can keep the feel of the scene intact without adding additional light, so the result will be scenes with the visual accuracy, depth and clarity you expect from a Canon camera. Face Detection Selftimer Automatically detects an increase in the number of faces and makes the appropriate adjustments. For instance, to include the photographers face in a group shot, theres no need to rush in. Just put the camera on a stand or tripod, specify Face Detection Selftimer, and the camera will wait for the photographers face to get on camera before it takes the shot. Motion Detection tracks moving subjects in a much larger range, and the Servo AF retains focus on a moving subject after the shutter button is pressed halfway allowing you to wait for the perfect shot without refocusing. Intelligent Contrast Correction DIGIC 4 also makes possible the iContrast Intelligent Contrast Correction system, which controls the compensation level in pixel units to brighten dark areas while leaving bright areas unchanged for better images where the main subject is dark, and more natural transition. The PowerShot SX210 IS can even use iContrast in playback mode to adjust images that were shot without the setting activated.
